Dear Company Hiring Team,

Date: Sept. 26, 2024

I'm writing to convey my keen interest in the opportunity of an engineering internship position, which I was able to speak briefly on at the UTA Engineering Career Fair. I am enthusiastic about the chance to contribute my knowledge and abilities to the company's initiatives and work with a skilled team of professionals since I am a committed and ambitious engineering student who has a passion for aerospace and mechanical engineering.

I'm now actively enrolled and seeking a bachelor of science degree with an aerospace major and mechanical minor at the University of Texas, Arlington. As my attached resume shows, I have built a strong foundation in a variety of engineering ideas through my curriculum, as well as competence in related skills like programming languages, software tools, laboratory techniques, and problem-solving skills. I have also contributed to my accomplishments through consistent academic success, strong leadership capabilities, and even gained recognition by my peers.

I think my technical knowledge along with my solid analytical capabilities makes me a viable candidate for the engineering intern post. I am skilled at locating and evaluating difficult issues and making strong recommendations. I am also more than capable of communicating and presenting these ideas to groups or teams of people. I can handle difficult engineering problems and contribute to creative initiatives because of this experience.

My participation in extracurricular activities and leadership positions has also improved my teamwork and communication abilities. I've actively engaged in campus organizations as well as many part-time jobs where I've worked with a variety of people, effectively communicated ideas, and accomplished group objectives. With these abilities, I'm sure I can collaborate effectively with an engineering team at your company and add to its success.

I have always strived to learn more and better myself and I feel as though that desire and drive have led me to apply to your company. Your team has an extraordinary reputation that particularly attracts me. The company's contributions to engineering are impressive, and I'm thrilled to be part of a group advancing the industry.

As an engineering intern, I am excited to support an engineering team, help achieve its goals, and acquire useful business experience. My resume, which includes more information about my credentials, academic success, class experience, and accomplishments, is enclosed.

I appreciate your taking a look at my application. During an interview, I would enjoy the chance to talk about how my abilities and love of engineering fit with the company's objectives. As an engineering intern, I'm excited about the potential to help the company succeed as well as the opportunity to better myself along the way.

Matthew McCormick
